

IETLS writing task 1

Plastic is a petroleum product. It is not degradable and it can be harmful to the environment. Recycling is very important for maintaining our planet. We want to describe how plastic bottles are recycled? First we should collect garbage and categorize them into different materials. For example plastic, metals and food waste and such things. In a place different garbage will be sorted into a more exact category. After that plastic bottles and other plastic garbage will be compressed into blocks. In the factory recycling line they are crushed and washed for preparing for the next stage. Then they are converted to plastic pellets. They will be used as raw plastic material for making different kinds of plastic products like bottles, T-shirts and such things.

IETLS writing task 2

First years driverless cars and buses was a fantastic idea. But with progressing in computer computing, hardware and such things, Corporations faced with a great chance to develop driverless cars. Tesla is a leading company in developing driverless car technology.

Tesla tested and published some driverless cars. They have not yet received final approvals to make these cars public and they are in the testing phase. I think driverless cars are a good solution for overcoming global warming. I think for having better quality air and reducing pollution in metropolises, driverless cars are an effective solution. Another benefit of driverless technology does not need to have a driver, it can. This can reduce shipping costs for companies and even customers.

Disadvantage of a driverless car is Li element for making car batteries is expensive and rare. It can be a big challenge in mass production. Another problem in electric driverless cars need expensive for controlling in driving. Tesla wants to use an image processing technique and removing extra sensors to reduce car prices.
